

Employee Management System(Initial Draft)

Leapfrog Technology · Version 1.0 · May 2026

Prepared by: Aayush Basnet, QA Engineer

This plan provides an overview of the project and product test strategy, a list of testing deliverables, and a plan for testing the Employee Management System (EMS) developed for Leapfrog Technology.

Change History

Date	Version	Change Summary	Prepared By
May 2026	1.0	Initial Draft	Aayush Basnet / QA

ID	Document Name	Author
[1]	Employee Management System : Figma Design Screens	Leapfrog Technology
[2]	EMS Requirements & Feature Specification	Leapfrog Technology

Introduction

The Test Plan is designed to prescribe the scope, approach, resources, and schedule of all testing activities for the Employee Management System (EMS) at Leapfrog Technology. The plan identifies the items to be tested, the features to be tested, the types of testing to be performed, the personnel responsible for testing, and the resources and schedule required to complete testing.

The EMS covers two primary feature flows identified from the provided Figma design screens:

- Flow 1 : Creating New Employee (multi-step wizard)
- Flow 2 : Work From Home (WFH) module and Leave Questions management

Features to be Tested

The following features are in scope for testing:

Feature	Description
Create New Employee	Multi-step form wizard: Primary Info, Profile Info, Official Info. Includes photo upload, skill tagging, and field validations.

Apply Work From Home	Form submission with reason, tasks, availability window, and mood/emoji selection. Supports reviewer approve/reject workflow.
WFH Details Table	Status badges, column display, filtering of WFH requests.
Leave Questions	CRUD operations: list, add, edit, delete questions. Date validation, emoji-based answer options.
Navigation	Top navigation, back navigation, stepper flows between form steps.

Approach / Strategy

Testing will be conducted as manual functional testing against the implemented application, using the Figma designs as the source of truth. The following techniques will be applied:

Functional Testing

- Positive Testing: verify that valid inputs produce the correct outcomes
- Negative Testing: verify that invalid or missing inputs trigger appropriate validation errors
- Boundary Testing: verify edge cases for date fields and optional vs. mandatory fields
- Test cases will be developed for each requirement on a sprint basis
- Test data will include both positive data (valid inputs per spec) and negative data (invalid inputs)
- Equivalence partitioning will minimize test scenarios for large forms requiring a range of inputs
- API testing will be performed using Postman to evaluate response messages and status codes
- Bugs will be logged in JIRA when actual outcome does not match expected outcome
- Regression testing will be performed at the end of every sprint and after every major feature release

UI / Visual Testing

- Labels, placeholders, icons, and layout will be verified against Figma design specifications
- Font consistency and component alignment will be checked across all screens
- System design will be evaluated based on mockups provided
- Consistent design will be verified across all major browsers

Usability Testing

- System will be tested for ease of use and intuitiveness of workflows
- Form submission via keyboard (Enter/Return key) will be verified
- Proper error messages and guidance for invalid inputs will be checked
- Navigation flows (Next, Previous, Finish, Back) will be verified for correct state preservation

Performance Testing

- Load testing will be performed using JMeter
- Response time with and without ramp-up time will be analysed
- Transaction Per Second (TPS) under varying load will be measured

Backend / API Testing

- Data flow between the EMS system and its API layer will be evaluated
- CRUD operations will be tested at database level
- Data duplication will be validated

Test Environment

Environment	Description
Browser	Latest Chrome (Desktop)
Test Data	Pre-prepared employee records, WFH requests in pending/approved/rejected states
Roles Required	Standard Employee (applicant) and Reviewer/Manager
Tools	JIRA (bug tracking), Google Drive (test case storage), Postman (API validation)
Operating Systems	Windows 10/11

Entry & Exit Criteria

5.1 Entry Criteria

- Development build is deployed to the test environment
- Figma designs have been reviewed and test cases written
- Test data (employee records, WFH requests) is prepared

5.2 Exit Criteria

- All planned test cases have been executed
- Zero critical defects remain open
- Test summary report has been signed off by the QA lead

Test Case Summary

Module	Total TCs	Pass	Fail	Blocked
Create Employee : Step 1 (Primary Info)				
Create Employee : Step 2 (Profile Info)				
Create Employee : Step 3 (Official Info)				
Stepper / Navigation (Flow 1)				
Apply WFH Form				
WFH Request Detail				
WFH Details Table				
Leave Questions (List & CRUD)				
Navigation & Responsiveness				
TOTAL				

Note: Test Case Summary is subject to change for every time a test is done.

Flow 1 : Create New Employee

The Create New Employee wizard consists of three sequential steps. All mandatory fields are marked with an asterisk (*). The user must complete each step before advancing via the Next button. The Finish button on Step 3 submits the complete form.

TC #	Module / Screen	Test Scenario	Steps / Input	Expected Result	Status
TC-001	Step 1 : Primary Info	Full Name fields visible (First, Middle, Last)	Open Create New Employee form	Three name fields rendered	
TC-002	Step 1 : Primary Info	Employee Email is mandatory	Leave Email blank, click Next	Validation error shown	
TC-003	Step 1 : Primary Info	Invalid email format rejected	Enter 'notanemail', click Next	Error: invalid email format	
TC-004	Step 1 : Primary Info	Mobile Phone field accepts numbers only	Enter alphabets in Mobile Phone	Field rejects non-numeric input	
TC-005	Step 1 : Primary Info	Home Phone is optional	Leave Home Phone blank, click Next	No validation error	
TC-006	Step 1 : Primary Info	Gender radio buttons (Male/Female/Others)	Select each gender option	Only one can be selected at a time	
TC-007	Step 1 : Primary Info	Date of Birth date picker works	Open date picker, select a date	Date populates the field correctly	
TC-008	Step 1 : Primary Info	Next button advances to Step 2	Fill mandatory fields, click Next	Step 2 (Profile Info) loads	
TC-009	Step 1 : Primary Info	Step indicator shows Step 1 active	View top stepper	Primary Info step is highlighted	
TC-010	Step 2 : Profile Info	Permanent Address is mandatory	Leave blank, click Next	Validation error shown	
TC-011	Step 2 : Profile Info	Temporary Address is optional	Leave blank, click Next	No validation error	
TC-012	Step 2 : Profile Info	Blood Group radio buttons display correctly	View blood group options	A, A+, B, B+ options shown	
TC-013	Step 2 : Profile Info	Marital Status radio buttons (Single/Married/Not Disclosed)	Select each option	Only one selected at a time	
TC-014	Step 2 : Profile Info	Skype ID field is optional	Leave blank, proceed	No validation error	
TC-015	Step 2 : Profile Info	GitHub ID field is optional	Leave blank, proceed	No validation error	
TC-016	Step 2 : Profile Info	Add Skill : skill categories displayed	View Add Skill section	JavaScript, PHP, Java, Database categories shown	
TC-017	Step 2 : Profile Info	Selecting a skill adds it as a tag	Click Ember JS under JavaScript	Ember JS tag appears below	
TC-018	Step 2 : Profile Info	Multiple skills can be selected	Select Ember JS and Express JS	Both appear as tags	

TC-019	Step 2 : Profile Info	Skill tag can be removed (x)	Click × on a skill tag	Tag is removed	
TC-020	Step 2 : Profile Info	Previous button returns to Step 1	Click Previous	Step 1 form loads with data preserved	
TC-021	Step 2 : Profile Info	Next button advances to Step 3	Fill mandatory fields, click Next	Step 3 (Official Info) loads	
TC-022	Step 3 : Official Info	Employee ID is mandatory	Leave blank, click Finish	Validation error shown	
TC-023	Step 3 : Official Info	Joining Date picker works	Select a date from picker	Date populates correctly	
TC-024	Step 3 : Official Info	Coach field is a searchable dropdown	Type in Coach field	Matching suggestions appear	

Flow 2 : WFH & Leave Questions

The WFH module allows employees to submit remote-work requests including reason, tasks, availability window, and a mood indicator. Reviewers can approve or reject requests. The Leave Questions module enables admins to manage check-in survey questions with emoji-based answer options.

TC #	Module / Screen	Test Scenario	Steps / Input	Expected Result	Status
TC-1	Apply WFH : Form	Employee name pre-populated	Open Apply WFH form	Employee field shows logged-in user's name	
TC-2	Apply WFH : Form	Date field defaults to today	Open WFH form	Date field shows current date	
TC-3	Apply WFH : Form	Reason text area accepts input	Type reason for WFH	Text is accepted	
TC-4	Apply WFH : Form	Task To Do field accepts input	Enter tasks	Text captured correctly	
TC-5	Apply WFH : Form	Availability field accepts time range	Enter '9-6'	Input accepted	
TC-6	Apply WFH : Form	Mood emoji selector shown	View form bottom	4 emoji options displayed	
TC-7	Apply WFH : Form	Only one mood emoji selectable	Click multiple emojis	Last selection is active	
TC-8	Apply WFH : Form	Additional Feedback is optional	Leave blank, click Apply	No validation error	
TC-9	Apply WFH : Form	Apply button submits the form	Fill form, click Apply	Request submitted successfully	
TC-10	WFH Request Detail	WFH request detail shows all fields	Open a WFH request	Employee, Date, Status, Availability, Reason displayed	
TC-11	WFH Request Detail	Status shows Pending by default	Submit WFH, view detail	Status = Pending	
TC-12	WFH Request Detail	Mood emoji visible in detail view	View WFH detail	Emoji rendered correctly	

TC-13	WFH Request Detail	Approve button visible to reviewer	Log in as reviewer, open request	Approve and Reject buttons shown	
TC-14	WFH Request Detail	Approve action updates status	Click Approve	Status changes to Approved	
TC-15	WFH Request Detail	Reject action updates status	Click Reject	Status changes to Rejected	
TC-16	WFH Details Table	Table shows all required columns	View WFH Details list	Employee, Date, Reason, Availability, Status columns present	
TC-17	Question Details : Create	Start Date is mandatory	Leave blank, click Save	Validation error shown	
TC-18	Question Details : Create	Save persists the question	Fill all fields, click Save	Question appears in list	
TC-19	Question Details : Edit	Existing data pre-populates form	Open existing question for edit	All fields show saved values	
TC-20	Question Details : Edit	Delete button shown in edit mode	Open question for edit	Red Delete button visible	
TC-21	Question Details : Edit	Delete removes record	Click Delete in edit view	Record removed, list shown	
TC-22	Responsiveness	Forms usable on smaller viewports	Resize browser to tablet width	No horizontal overflow or cut-off fields	

Defect Severity Classification

Severity	Description	Example
Critical	System crash, data loss, complete feature failure	Finish button does not submit the form
High	Key feature broken; workaround is difficult	Mandatory field validation not triggered
Medium	Feature partially broken; workaround exists	Skill tag close button does not remove the tag
Low	Minor UX issue, cosmetic defect	Placeholder text misaligned

Schedule

Task	Schedule
Master Test Plan	Before start of first sprint cycle
Test Case Design	In parallel with development cycle
Test Execution	After each task is deployed to test server
Bug Reporting	During each sprint cycle
Regression Testing	Towards end of every sprint and after major feature release

Performance Testing	After all features deployed to production-like environment
---------------------	--

Test Deliverables

Item	Description
Master Test Plan	This document
Test Cases	Maintained in Google Drive and shared with the team
Bug Reports	Bug tickets created in JIRA within the relevant story/task where the bug was found
Test Summary Report	Summary of execution results to be signed off by QA lead at exit
JMeter Report	JMeter summary table uploaded to shared drive after performance testing

Risks & Assumptions

- Re-testing may be required for flows affected by bug fixes during the sprint.
- Date picker behaviour may vary across browsers; cross-browser testing is recommended.
- Skill tag multi-select state is assumed to persist across Back/Previous navigation.
- The WFH mood emoji is assumed to be a required field based on design intent.
- Photo upload file-size limits are not specified in the design; standard web limits (≤ 5 MB) are assumed.
- Security testing will be performed by a DevOps/Security Engineer; report to be provided separately.
